Not everyone has a thorough background in project setup and any issues quickly becomes a PITA (not the meat). * Error reporting	
3/7/22 14:16:38	3/7/22 14:23:19	Has its uses	Very important	Very important	Not really important	Very important	Not important at all	This is essential	Very important		
3/7/22 14:15:27	3/7/22 14:35:03	This is essential	Has its uses	This is essential	Very important	Very important	Has its uses	Not really important	Has its uses	- Community support. Is it actively maintained? Is it thoroughly tested? ... - Documentation. - Price (although, I only know free ones). - WebPack 5 introduced possibilities to specify configurations in TS, which helps with getting to know what can be customised and avoid bugs in the config. So configuration format and measures to prevent shooting yourself in the foot, I guess. - Available statistics and debug support for generated bundles.
